GEOPOST REPORT SA05

Bugs

The hot topics button does not work yet? Almost done.

Last Location button does not work

View full post on search results currently does nothing.

Links to other profiles do nothing right now.

Edit on profile settings does not work yet

Profile only links to one user's profile instead of routing to everyone's

New messages are not being written to the database as of yet. (Support is there, though not sure why)

Security and followers in settings do not do anything as of yet.

Log out button does not work (and won't).

Update profile picture does not work as of yet.

General link in settings does not work as of yet.

React components

Messageframe renders the page itself

Messages render user messages.

Conversation renders the single message from the user into the database

Index.js it will eventually render the different components of index.html

Profile renders the page itself

Profile_settings renders the settings button within the navbar.

Profile_Options renders settings page itself

Search result renders a single information from database like username, etc.

Searchresults_comments renders the display page for the search results

Clicking on comments under Search expands the post

Navbar renders the navigation bar at the initial page.

Settings_table renders the general settings table within settings (the profile part) and communicates with the database.

Contributions

Samuel did work/create on the database, as well as work on the google map in the initial page and the nav bar. He also set up the server and the search react component, as well as the comments on posts in search.

Kevin worked on the react part of the profiles settings

Phil worked on the react portion of the app's messages feature.

Michael worked on the hot topics page. I'll add more when I finish.

Daoxu worked on upgrading profile component and react atm. Added a few more sample entries to the database for profile. Profile routes to only the profile of the person user that can be changed in profile settings

Henrique worked on this document and some work with index.js

Cuts

As of now there are not any features that we decided to cut out.

ER
No changes made to the ER Diagram.
